EDUCATION

Tufts University, Medford, MA

May 2025

Bachelor of Science in Computer Science, Minor in French

GPA: 3.81, *summa cum laude*, Dean's List all semesters

Relevant Courses: Programming Languages, Machine Structure and Assembly Language Programming, Data Structures, Web Programming, Discrete Mathematics, Algorithms, Linear Algebra, Introduction to Security, Computation Theory, Concurrent Programming

EXPERIENCE

Software Engineer Intern, Boston, MA

June 2024 – August 2024

Nasdaq

- Designed and built a program that creates consistency in LLM outputs through validation on a user-specified schema, allowing seamless integration with other systems and APIs (Skill Chaining Bot)
- Led a team of four interns, effectively delegating tasks, coordinating project direction and organizing key presentations and meetings for stakeholders
- Strengthened full-stack development skills by building a scalable application with Python, JavaScript, Typescript, CSS, React, and hosting on AWS

Software Developer, Tufts University

September 2024 – May 2025

JumboCode

- Developed a web app using React and Typescript to share a public event calendar for residents of LGBTQ Senior Housing in Hyde Park
- Dedicated 6 hours per week of personal development time as well as team and club meetings

Teaching Fellow, Tufts University

September 2023 – May 2025

Department of Computer Science

- Responsible for a team of twelve Teaching Assistants, hosted grading meetings, organized schedules, and provided guidance and leadership
- Ran office hours for a course of over one hundred students to help debug and design code in C++ and in Python
- Designed course material and worked closely with professor on course improvements
- Graded and provided detailed feedback on homework, projects, and exams

TECHNICAL SKILLS

Programming Languages: Python, C++, C, TypeScript, JavaScript, HTML, Erlang, Scheme, ML, x86 Assembly Language

Frameworks & Tools: MongoDB, React, Tailwind, Linux, Pydantic, Git, Visual Studio, NodeJS, AWS

PROJECTS

Skill Chaining Bot, Nasdaq SWE Internship

- Developed a program that structures LLM outputs into a strict, user-specified, JSON format
- Implemented validation processes to ensure that LLM responses exactly fit user defined schema
- Demonstrated productivity boosts from this automation through specific use cases, then quantified these savings in terms of time and cost
- Enhanced the usability of LLM responses by ensuring consistent, clear, and reliable outputs

Universal Virtual Machine, Machine Structure and Assembly Language Programming, Tufts University

- Designed and wrote the software implementation of a virtual machine in C
- Analyzed the performance of the program, given different structural choices, making changes based on this information to reach performance goals

College Finder App, Web Programming, Tufts University

- Utilized a large database to develop a quiz using MongoDB and NodeJS, targeted towards prospective college students to determine which colleges fit their preferences and goals
